The laboratory grown diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man or manufactured process. IGI employs and uses those techniques and equipment currently available to IGI, including, without limitation, for magnification, collected light source, binocular microscope, master color comparison stones, non-contact optical measuring device, Diamond Sure™ Diamond Viewer™, Spectrophotometer and such other instruments and/or processes as deemed appropriate by IGI. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
