The laboratory grown diamond described in this Report ("Report") has been graded, tested, analyzed, measured and/or inspected by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (or manufactured) processes. Cut, weight, and other descriptive and important information currently available to IGI, including but not limited to: magnification, collected light maps, binocular microscope, master color comparison stones, non-contact optical measuring devices, Diamond Sure™ Diamond Viewer™ Spectrophotometer and such other instruments and/or processes as deemed appropriate by IGI. This Report includes additional security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
