The laboratory grown diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inspected by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man or manufactured processes. IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, for magnification, collected light images, binocular microscope, master color comparison stones, non-contact optical measuring device, Diamond Sure® Diamond Viewer®, Spectrophotometer and each instrument and/or processes as deemed appropriate by IGI. This Report includes advanced security features. A fully accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
